

DINESH KUMAR M

Blockchain Engineer | Smart Contract Developer | Web3 Full-Stack

dineshkumar.dev25@gmail.com | +91-6382580462 | github.com/dinesh |
linkedin.com/in/dinesh | Coimbatore, India

PROFESSIONAL SUMMARY

Blockchain Developer with hands-on experience in Solidity smart contracts, DApp development, and Web3 full-stack integration. Skilled in building secure, gas-optimized smart contracts and decentralized applications using Ethereum, React.js, and Ethers.js. Passionate about DeFi, smart contract security, and blockchain infrastructure.

TECHNICAL SKILLS

Blockchain & Web3: Solidity, Ethereum, Hardhat, foundry, Truffle, Ethers.js, Web3.js, IPFS, ERC-20/ERC-721, MetaMask, DeFi, Smart Contract Security

Languages & Frontend: JavaScript (ES6+), TypeScript, Python, React.js, Next.js, HTML5, CSS3

Backend & Tools: Node.js, Express.js, MongoDB, PostgreSQL, Docker, Git, AWS, Remix IDE

PROJECTS

NFT Marketplace | Solidity • React.js • IPFS • Hardhat

Built a decentralized NFT marketplace on Ethereum with ERC-721 contracts, enabling minting, listing, buying & selling with gas optimization (~20% cost reduction).

Integrated IPFS for metadata storage and MetaMask for wallet authentication; built a React.js frontend with real-time event listeners via Ethers.js.

AI Fraud Detection for Smart Contracts | Python • ML • Ethereum • Web3.js

Developed an anomaly detection system using Isolation Forest & DBSCAN to flag suspicious on-chain transactions in real time with high-precision risk scoring.

Built a data pipeline ingesting live blockchain data, extracting transaction features, and exposing risk scores through a REST API.

Token Staking DApp | Solidity • React.js • Hardhat • Ethers.js

Deployed ERC-20 staking contracts with configurable APY, lock periods, and compound rewards; built a live dashboard tracking balances and staking history.

Achieved 95%+ test coverage with Hardhat & Chai across all contract functions.

Organic Food Traceability | Solidity • React.js • Node.js • Hardhat • MongoDB

? Built a decentralized supply chain traceability system on Ethereum to track organic food from farm to consumer, using Solidity smart contracts to log immutable lifecycle events.
